

FROM FOREST TO THE INTERIOR - THE JOURNEY OF WOOD

Proudly supported by

HAVWOODS
INTERNATIONAL

1. How big a problem is deforestation globally?
2. Geographically, where is most deforestation occurring?
3. Outline the methods that Forest Certifications use to assess the sustainability of timber products.
4. Name the different timber harvesting methods used around the world.
5. Which wood species are most suitable for flooring applications? Why?
6. Outline the attractions and benefits of reclaimed timber flooring products.

At the end of this panel, attendees will be able to:

- Outline the various benefits of timber flooring as compared to alternatives.
- Explain the ways that variations in factors like timber species, grade, harvesting, and processing have on the appearance and performance of finished flooring products.
- Explain the ways that variations in these factors affect the sustainability of finished flooring products.
- Identify the best timber flooring choices for different design briefs and different applications.
