

Please be aware you are required to manage your own CPD records. We will provide you with your participation certificate and answer sheet once you have attended the full seminar.

## Wet Areas & Overflow Protection - A Guide For Specifiers

Proudly supported by

- 1. What types of buildings does Part F2 of the NCC 2022 Volume One apply to?
- 2. Describe the key areas within a building that require waterproofing according to Part F2.
- 3. What are the potential consequences of inadequate waterproofing in wet areas?
- 4. What are some common overflow protection measures that must be implemented in wet areas?
- 5. What standards must the materials used for waterproofing and overflow protection comply with?
- 6. What are some design strategies to ensure compliance with NCC requirements for wet areas?

## By the end of this session you should be able to:

- · Outline the causes and potential consequences of excess water accumulation in wet areas
- · Outline the requirements for wet areas and overflow protection as outlined in NCC 2022
- · Identify the types of products designed to deal with water accumulation and outline their effectiveness in this sense

Explore practical applications and compliance strategies relevant to architectural design
