

Please be aware you are required to manage your own CPD records. We will provide you with your participation certificate and answer sheet once you have attended the full seminar.

Assessing & Integrating AAC Systems

Proudly supported by

- 1. What is Autoclaved Aerated Concrete (AAC)?
- 2. What are the benefits of ACC, compared to alternative products?
- 3. Name three common uses of AAC in multi residential and low-rise apartments.
- 4. Name three common uses of ACC in commercial and industrial applications.
- 5. Identify the three Australian Standards that relate to AAC

At the end of this panel, attendees will be able to:

- · Explain what autoclaved aerated concrete (AAC) is, how it is made and where it is used
- · Recognise the three parts of Australian Standard AS5146, as they apply to AAC
- Outline the Fire-rating compliance, Acoustic compliance and Thermal performance requirements of AAC
- · Outline the various considerations involved in selecting and specifying AAC systems

1 Formal CPD point
