WATER SAVING WITHOUT COMPROMISING ON PERFORMANCE

- 1. Ground water procurement is significantly more energy efficient than desalination. How much more energy efficient?
- 2. Globally, how many people lack access to potable water?
- 3. What is the WELS rating scheme?
- 4. What proportion of household water consumption takes place in the bathroom (i.e. in toilet flushing, washing, showering, and bathing)?
- 5. What are flow regulators and how do they work to reduce water consumption?
- 6. How many litres of water does it take to produce one litre of bottled water?

At the end of this panel, attendees will be able to:

- Explain why water scarcity has become a cause for concern. both globally and here in Australia
- Identify the ways in which domestic Australian consumers use water, as well as the areas in which there is potential for them to save this resource

Identify the various types of sanitaryware products, plumbing systems and appliances that can help

• Outline the regulatory framework associated with plumbing systems and water savings in Australia, as well as the various international certification schemes associated with sustainable water usage
