

## Progressive Plumbing Choices – Versatile, Efficient & Effective

Proudly supported by

1. Why is accessibility a major issue when incorporating conventional plumbing systems?
2. Explain how conventional plumbing can limit design possibilities for architects.
3. In what ways does conventional plumbing limit where items such as sinks, showers, and toilets can be placed.
4. In what ways can new plumbing technologies potentially introduce a new way of plumbing?
5. What are macerator pumps and how do they work?
6. How do lifting stations work?

**At the end of this panel, attendees will be able to:**

- Outline the difficulties and challenges associated with conventional plumbing
- Identify the latest plumbing products on the market and explain how they work
- Nominate the types of applications for which macerator pumps, grey water pumps, lifting stations, and inground pump stations are most suitable
- Explain how these products can help solve many of the problems associated with plumbing and be of benefit to architects and designers
