NCC 2022 - NEW COATING PROVISIONS FOR CORROSION PROTECTION ON STRUCTURAL

1. How did the previous iteration of the National Construction Code (NCC 2019) approach corrosion protection?
2. Was NCC 2019 adequate (in terms of corrosion protection)?
3. How did NCC 2022 change the approach to corrosion protection and structural steel?
4. How do the required corrosion prevention coating systems referred to in NCC 2019 and NCC 2022 differ from each other?
5. How can specifiers adhere to NCC 2022 Corrosion Protection provisions?
6. What needs to change in construction management processes, during the project appraisal stage, to properly meet the ambitions of the NCC changes?

At the end of this panel, attendees will be able to:

- Outline the prevalence of corrosion in the built environment and identify its negative impacts.
- Identify the legislative framework surrounding corrosion, including the NCC and relevant standards.
- Explain the ways NCC 2022 differs, in terms of its approach to corrosion management, from NCC 2019.
- Identify the ways in which this regulatory framework is still deficient.
- Outline the ways that specifiers need to go beyond the regulatory requirements to achieve best practice corrosion management.
